300 AC/DC is an advanced technology three-phase welding power source for AC and DC TIG welding operations.

AC TIG functions are ideal for aluminum, magnesium and related alloys welding.

Mild steel, stainless steel and copper can be easily welded in DC TIG. AC TIG welding is optimized thanks to:

- Synergic arc ignition selection located on the front panel, it modifies the ignition according to electrode diameter.
- Extra fusion function maximizes arc focusing for considerable thin material in AC TIG welding.
- Mixed AC/DC increases arc penetration for thick aluminum plates.
- Pulsed AC TIG mode which prevents the risk of deformation of the workpiece in the case of prolonged welding operations.

Up to 4,00mm diameter electrode welding is possible in MMA
